MS-D0S

FULL LIST OF COMMANDS

1	ANSI.SYS	Defines functions that change display graphics, control cursor movement, and
		reassign keys.
2	APPEND	Causes MS-DOS to look in other directories when editing a file or running a command.
3	ARP	Displays, adds, and removes arp information from network devices.
4	ASSIGN	Assign a drive letter to an alternate letter.
5	ASSOC	View the file associations.
6	AT	Schedule a time to execute commands or programs.
7	ATMADM	Lists connections and addresses seen by Windows ATM call manager.
8	ATTRIB	Display and change file attributes.
9	BATCH	Recovery console command that executes several commands in a file.
10	BCDEDIT	·
		Modify the boot configuration data store.
11	BOOTCFG	Recovery console command that allows a user to view, modify, and rebuild the boot.ini file.
12	DDEAK	
12	BREAK	Enable and disable Ctrl+C feature.
13	CACLS	View and modify file ACL's.
14	CALL	Calls a batch file from another batch file.
15	CD	Changes directories.
16	СНСР	Supplement the international keyboard and character set information.
17	CHDIR	Changes directories.
18	CHKDSK	Check the hard drive running FAT for errors.
19	CHKNTFS	Check the hard drive running NTFS for errors.
20	CHOICE	Specify a listing of multiple options within a batch file.
21	CLIP	Redirect command line output to the Windows clipboard.
22	CLS	Clears the screen.
23	CMD	Opens the command interpreter.
24	COLOR	Change the foreground and background color of the MS-DOS window.
25	COMMAND	Opens the command interpreter.
26	COMP	Compares files.
27	COMPACT	Compresses and uncompress files.
28	CONTROL	Open Control Panel icons from the MS-DOS prompt.
29	CONVERT	Convert FAT to NTFS.
30		
	COPY	Copy one or more files to an alternate location.
31	COPY	Copy one or more files to an alternate location. Change the computer's input/output devices.
31	CTTY	Change the computer's input/output devices.
31 32	CTTY DATE	Change the computer's input/output devices. View or change the systems date.
31 32 33 34	CTTY DATE DEBUG	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs.
31 32 33	CTTY DATE DEBUG DEFRAG DEL	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files.
31 32 33 34 35 36	CTTY DATE DEBUG DEFRAG DEL DELETE	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file.
31 32 33 34 35 36 37	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories.
31 32 33 34 35 36 37 38	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory.
31 32 33 34 35 36 37 38 39	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers.
31 32 33 34 35 36 37 38 39 40	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk.
31 32 33 34 35 36 37 38 39 40	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk.
31 32 33 34 35 36 37 38 39 40 41 42	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past.
31 32 33 34 35 36 37 38 39 40 41 42 43	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users.
31 32 33 34 35 36 37 38 39 40 41 42 43 44	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers.
31 32 33 34 35 36 37 38 39 40 41 42 43 44	CTTY DATE DEBUG DEFRAG DEL DELTE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY DRIVPARM	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers. Enables overwrite of original device drivers.
31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY DRIVPARM ECHO	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers. Enables overwrite of original device drivers. Displays messages and enables and disables echo.
31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY DRIVPARM ECHO EDIT	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers. Enables overwrite of original device drivers. Displays messages and enables and disables echo. View and edit files.
31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY DRIVPARM ECHO EDIT EDLIN	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers. Enables overwrite of original device drivers. Displays messages and enables and disables echo. View and edit files.
31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48 49	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY DRIVPARM ECHO EDIT EDLIN EMM386	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers. Enables overwrite of original device drivers. Displays messages and enables and disables echo. View and edit files. View and edit files. Load extended memory manager.
31 32 33 34 35 36 37 38 39 40 41 42 43 44 45 46 47 48	CTTY DATE DEBUG DEFRAG DEL DELETE DELTREE DIR DISABLE DISKCOMP DISKCOPY DOSKEY DOSSHELL DRIVERQUERY DRIVPARM ECHO EDIT EDLIN	Change the computer's input/output devices. View or change the systems date. Debug utility to create assembly language programs to modify hardware settings. Re-arrange the hard drive to help with loading programs. Deletes one or more files. Recovery console command that deletes a file. Deletes one or more files or directories. List the contents of one or more directory. Recovery console command that disables Windows system services or drivers. Compare a disk with another disk. Copy the contents of one disk and place them on another disk. Command to view and execute commands that were ran in the past. A GUI to help with early MS-DOS users. Display a list of installed device drivers. Enables overwrite of original device drivers. Displays messages and enables and disables echo. View and edit files.

		command.
52	ERASE	Erase files from the computer.
53	EXIT	Exit from the compater.
54	EXPAND	Expand a Microsoft Windows file back to its original format.
55	EXTRACT	Extract files from the Microsoft Windows cabinets.
56	FASTHELP	Displays a listing of MS-DOS commands and information about them.
57	FC	Compare files.
	FDISK	· ·
58 59	FIND	Setup drive by create and managing partitions on the hard drive. Search for text within a file.
60	FINDSTR	
61	FIXBOOT	Searches for a string of text within a file. Writes a new boot sector.
62	FIXMBR	Writes a new boot sector. Writes a new boot record to a disk drive.
63	FOR	Boolean used in batch files.
64	FORMAT	
	_	Command to erase and prepare a disk drive.
65 66	FTP	Command to connect and operate on an FTP server.
	FTYPE	Displays or modifies file types used in file extension associations.
67	GOTO CDAFTABL	Moves a batch file to a specific label or location.
68	GRAFTABL	Show extended characters in graphics mode.
69	HELP	Display a listing of commands and brief explanation.
70	IF	Allows for batch files to perform conditional processing.
71	IFSHLP.SYS	32-bit file manager.
72	IPCONFIG	Network command to view network adapter settings and assigned values.
73	KEYB	Change layout of keyboard.
74	LABEL	Change the label of a disk drive.
75	LH	Load a device driver in to high memory.
76	LISTSVC	Recovery console command that displays the services and drivers.
77	LOADFIX	Load a program above the first 64 k.
78	LOADHIGH	Load a device driver in to high memory.
79	LOCK	Lock the hard drive.
80	LOGOFF	Logoff the currently profile using the computer.
81	LOGON	Recovery console command to list installations and enable administrator login.
82	MAP	Displays the device name of a drive.
		Command to create a new directory.
83	MD	Command to create a new directory.
83 84	MEM	Display memory on system.
_	MEM MKDIR	Display memory on system. Command to create a new directory.
84	MEM MKDIR MKLINK	Display memory on system. Command to create a new directory. Creates a symbolic link.
84 85	MEM MKDIR MKLINK MODE	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings.
84 85 86	MEM MKDIR MKLINK	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time.
84 85 86 87	MEM MKDIR MKLINK MODE	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings.
84 85 86 87 88	MEM MKDIR MKLINK MODE MORE	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time.
84 85 86 87 88 89	MEM MKDIR MKLINK MODE MORE MOVE	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility.
84 85 86 87 88 89	MEM MKDIR MKLINK MODE MORE MOVE MSAV	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner.
84 85 86 87 88 89 90	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility.
84 85 86 87 88 89 90 91	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM.
84 85 86 87 88 89 90 91 92	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT.
84 85 86 87 88 89 90 91 92 93	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings.
84 85 86 87 88 89 90 91 92 93 94 95	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS.
84 85 86 87 88 89 90 91 92 93 94 95	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSTAT	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information.
84 85 86 87 88 89 90 91 92 93 94 95 96	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NLSFUNC	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information.
84 85 86 87 88 89 90 91 92 93 94 95 96 97	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network. View and modify the computer's path location.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network. View and modify the computer's path location. View and locate locations of network latency.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING PAUSE	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network. View and modify the computer's path location. View and locate locations of network latency. Command used in batch files to stop the processing of a command.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING PAUSE PING	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network. View and modify the computer's path location. View and locate locations of network latency. Command used in batch files to stop the processing of a command. Test and send information to another network computer or network device.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING PAUSE PING POPD	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Load country specific information. Load up an IP address of a domain or host on a network. View and modify the computer's path location. View and locate locations of network latency. Command used in batch files to stop the processing of a command. Test and send information to another network computer or network device. Changes to the directory or network path stored by the PUSHD command.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103 104	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING PAUSE PING POPD POWER	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network. View and modify the computer's path location. View and locate locations of network latency. Command used in batch files to stop the processing of a command. Test and send information to another network computer or network device. Changes to the directory or network path stored by the PUSHD command. Conserve power with computer portables.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103 104 105	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING PAUSE PING POPD POWER PRINT	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Look up an IP address of a domain or host on a network. View and modify the computer's path location. View and locate locations of network latency. Command used in batch files to stop the processing of a command. Test and send information to another network computer or network device. Changes to the directory or network path stored by the PUSHD command. Conserve power with computer portables. Prints data to a printer port.
84 85 86 87 88 89 90 91 92 93 94 95 96 97 98 99 100 101 102 103 104 105 106	MEM MKDIR MKLINK MODE MORE MOVE MSAV MSD MSCDEX NBTSTAT NET NETSH NETSH NETSTAT NLSFUNC NSLOOKUP PATH PATHPING PAUSE PING POPD POWER PRINT PROMPT	Display memory on system. Command to create a new directory. Creates a symbolic link. Modify the port or display settings. Display one page at a time. Move one or more files from one directory to another directory. Early Microsoft virus scanner. Diagnostics utility. Utility used to load and access the CD-ROM. Displays protocol statistics and current TCP/IP connections using NBT. Update, fix, or view the network or network settings. Configure dynamic and static network information from MS-DOS. Display the TCP/IP network protocol statistics and information. Load country specific information. Load country specific information. View and modify the computer's path location. View and locate locations of network latency. Command used in batch files to stop the processing of a command. Test and send information to another network computer or network device. Changes to the directory or network path stored by the PUSHD command. Conserve power with computer portables. Prints data to a printer port. View and change the MS-DOS prompt.

108	QBASIC	Open the QBasic.
109	RD	Removes an empty directory.
110	REN	Renames a file or directory.
111	RENAME	Renames a file or directory.
